

November 29, 2016

The Honorable Paul D. Ryan
Speaker
United States House of Representatives
Washington, DC 20515

The Honorable Nancy Pelosi
Democratic Leader
United States House of Representatives
Washington, D.C. 20515

The Honorable Mitch McConnell
Majority Leader
United States Senate
Washington, DC 20510

The Honorable Harry Reid
Democratic Leader
United States Senate
Washington, DC 20510

Dear Speaker Ryan, Leader Pelosi, Leader McConnell and Leader Reid:

As members of One Voice Against Cancer (OVAC), a broad coalition of cancer-related organizations that focuses on federal investment in cancer research, we are pleased to offer our support for the 21st Century Cures Act. As a coalition, OVAC focuses exclusively on increasing federal funding for cancer research and other programs essential to the fight against cancer. For this reason, we commend you for the inclusion of funding for the National Institutes of Health (NIH) as well as the Food and Drug Administration (FDA) in the 21st Century Cures Act. Many OVAC members are reaching out to you directly to comment on other aspects of the bill.

OVAC members believe the goal of making a decade's worth of life saving scientific progress in the next five years can most likely be achieved by Congress promptly assuring essential funding of it by enactment of the 21st Century Cures Act in 2016.

It is estimated that almost 1.7 million Americans will be diagnosed with cancer this year. More than 595,000 Americans will die from the disease in 2016, and it will cost our economy an estimated \$216 billion in direct treatment costs and lost productivity. Annual cancer incidence rates are also projected to increase by 31 percent over the next decade, growing to 2.1 million people diagnosed in 2025. Furthermore, the number of cancer survivors now exceeds 15.5 million, and services for those living with, through and beyond a diagnosis must be improved.

For decades, research conducted at NIH and the National Cancer Institute (NCI) has played a key role in virtually every major cancer prevention, detection, and treatment discovery. The Cancer Moonshot Initiative provides a blueprint for how to accelerate and extend progress for the cancer patients who need it most by helping to modernize clinical trials, build on advances in precision oncology, develop effective immunotherapies for a broader array of cancers, and ensure an appropriate emphasis on pediatric cancers as well. The importance of Congress funding the

Cancer Moonshot Initiative through the enactment of the 21st Century Cures Act in 2016 is without question. Waiting until next year to act is not an option for cancer patients and their families.

In order to maximize the benefits of this new, targeted innovation funding at the NIH, it is imperative that these resources be used to enhance designated strategic priorities and not replace, a strong investment in NIH through the appropriations process. OVAC is committed to working with Congress to ensure continued, sustainable growth in the NIH budget.

On behalf of the millions of researchers, physicians, pharmacists, nurses, patients, and survivors represented by OVAC, we thank you for your efforts and ask you to complete this momentous effort to help cancer patients and accelerate the pace of medical discovery.

Sincerely,
