Lung cancer screening should only be done at a center that knows how to do it, like a GO2 Foundation for Lung Cancer Screening Center of Excellence.

Contact GO2 Foundation for Lung Cancer to learn more about screening and find out where to get a low-dose CT scan.

**Lung Cancer Screening:**
- Uses a low dose CT scan
- Takes about 15 minutes
- Uses no needles

**Is Lung Cancer Screening Right For You?**
- **Are you 55 years or older?**
- **Do you smoke now? Or, if you quit, it was in the last 15 years?**
- **Smoke (or you did smoke) a lot, such as at least 1 pack a day for 30 years OR at least 2 packs a day for 15 years**

**Other Things To Know**
- For most people, screening is done once a year.
- Screening might find spots in the lung, called nodules.
- Like with skin moles, most lung nodules are not cancer and will never become lung cancer.
- Also like moles, it is a good idea to watch nodules over time to see if they grow or change.

**Medicare and most private insurance pays for lung cancer screening. Medicaid also covers screening in SOME states.**

**Talk to a doctor to see if screening is right for you. You will need a written order to get a scan.**
